

SALES TREND VISUALIZATION REPORT

Submitted By

Name:MEHA MARY SAMUVEL

Domain: Data Analytics

1. Introduction

Sales Trend Visualization is a data analytics project used to analyze business sales performance using charts and graphs. The project helps identify sales patterns, profit trends, regional sales performance, and top-selling products.

2. Objective

The main objective of this project is to analyze and visualize sales data using data analytics techniques. The project helps in understanding sales performance, profit trends, regional sales distribution, and top-selling products through charts and dashboards. It also aims to improve decision-making using data visualization tools like Python and Power BI.

3. Tools Used

- Python
- Pandas
- Matplotlib
- Google Colab
- Power BI

4. Dataset Used

The project uses the **Superstore Sales Dataset** downloaded from:

[Kaggle](#)

Dataset contains:

- Sales details
- Product categories
- Profit information
- Regional sales data

- Order dates

5. Steps Performed

Step 1: Data Loading

The CSV dataset was loaded using Pandas.

Step 2: Data Cleaning

- Checked missing values
- Converted date columns
- Fixed encoding issues

Step 3: Data Visualization

The following charts were created:

- Monthly Sales Trend
- Region-wise Sales
- Category-wise Comparison
- Profit Analysis
- Top Selling Products

Step 4: Dashboard Creation

Charts were arranged in Power BI dashboard for better visualization.

6. Charts Included

- Monthly Sales Bar Graph
- Region-wise Pie Chart
- Category Comparison Graph
- Profit Analysis Graph
- Top Selling Products Graph

7. Observations

- Sales vary across different months.
- Some regions contribute more sales than others.
- Technology category gives higher profit.

- Certain products are top-selling products.
- Data visualization helps understand business performance.

8. Conclusion

The project successfully analyzed sales data and visualized important business trends using Python and Power BI. The analysis helps businesses make better decisions using data insights.
